

Supply Curves**name:**

How Markets Work

Unit 2

Key Idea:

Define supply, demand, quantity supplied, and quantity demanded; graphically illustrate situations that would cause changes in each, and demonstrate how the equilibrium price of a product is determined by the interaction of supply and demand in the market place. (1.4)

A) Rewrite the Key Idea as an investigative question.

1-20

1 Macroeconomics**ACTIVITY 1-6****Part A: A Change in Supply versus a Change in Quantity Supplied**

Student Alert: The distinction between a “change in supply” and a “change in quantity supplied” is very important!

Study the data in Table 1-6.1 and plot the supply of Greebes on the graph in Figure 1-6.1. Label the supply curve S and answer the questions that follow.

Table 1-6.1

Supply of Greebes

Price (per Greebe)	Quantity supplied per week (millions of Greebes)
\$0.05	0
\$0.10	50
\$0.15	100
\$0.20	150
\$0.25	200
\$0.30	250
\$0.35	300
\$0.40	350

Figure 1-6.1

Supply of Greebes

- 1) The data for supply curve S indicate that at a price of \$0.25 per Greebe, suppliers would be willing to offer _____ million Greebes. All other things held constant, if the price of Greebes increased to \$0.30 per Greebe, suppliers would be willing to offer _____ million Greebes. Such a change would be an increase in (**supply / quantity supplied**). All other things held constant, if the price of Greebes decreased to \$0.20 per Greebe, suppliers would be willing to offer _____ million Greebes. Such a change would be called a decrease in (**supply / quantity supplied**).

Table 1-6.2

New Supply of Greebes

Price (per Greebe)	Quantity supplied per week (millions of Greebes)
\$0.15	0
\$0.20	50
\$0.25	100
\$0.30	150
\$0.35	200
\$0.40	250

Now, let's suppose that there is a change in the price of several of the raw materials used in making Greebes. This change in the ceteris paribus conditions underlying the original supply of Greebes will result in a new set of data, such as that shown in Table 1-6.2. Study the data, and plot this supply of Greebes on the graph in Figure 1-6.1. Label the new supply curve S1 and answer the questions that follow.

2) Comparing the new supply curve (S1) with the original supply curve (S), we can say that the change in the supply of Greebes results in a shift of the supply curve to the (**left / right**). Such a shift indicates that at each of the possible prices shown, suppliers are now willing to offer a (**smaller / larger**) quantity; and at each of the possible quantities shown, suppliers are willing to accept a (**higher / lower**) minimum price. The cause of this supply curve shift was a(n) (**increase / decrease**) in prices of several of the raw materials used in making Greebes.

Table 1-6.3

New Supply of Greebes

Price (per Greebe)	Quantity supplied per week (millions of Greebes)
\$0.10	150
\$0.15	200
\$0.20	250
\$0.25	300
\$0.30	350
\$0.35	400

Now, let's suppose that there is a dramatic change in the price of Silopanna, a resource used in the production of Greebes. This change in the ceteris paribus conditions underlying the original supply of Greebes will result in a new set of data shown in Table 1-6.3. Study the data, and plot this supply of Greebes on the graph in Figure 1-6.1. Label the new supply curve S2 and answer the questions that follow.

3) Comparing the new supply curve (S2) with the original supply curve (S), we can say that the change in the supply of Greebes results in a shift of the supply curve to the (**left / right**). Such a shift indicates that at each of the possible prices shown, suppliers are now willing to offer a (**smaller / larger**) quantity; and at each of the possible quantities shown, suppliers are willing to accept a (**lower / higher**) minimum price. The cause of this supply curve shift is a(n) (**increase / decrease**) in the price of Silopanna, a resource used in the production of Greebes.

Part B: Do You Get It?

Now, to test your understanding, choose the answer you think is the best in each of the following multiple-choice questions.

4. All other things held constant, which of the following would not cause a change in the supply of beef?
- (A) A decrease in the price of beef
 - (B) A decrease in the price of cattle feed
 - (C) An increase in the price of cattle feed
 - (D) An increase in the cost of transporting cattle to market
5. "Falling oil prices have caused a sharp decrease in the supply of oil." Speaking precisely, and using terms as they are defined by economists, choose the statement that best describes this quotation.
- (A) The quotation is correct: a decrease in price causes a decrease in supply.
 - (B) The quotation is incorrect: a decrease in price causes an increase in supply, not a decrease in supply.
 - (C) The quotation is incorrect: a decrease in price causes an increase in the quantity supplied, not a decrease in supply.
 - (D) The quotation is incorrect: a decrease in price causes a decrease in the quantity supplied, not a decrease in supply.
6. You overhear a fellow student say, "Economic markets are confusing. If supply increases, then price decreases; but if price decreases, then supply also will decrease. If supply falls, price will rise; but if price rises, supply also will rise." Dispel your friend's obvious confusion (in no more than one short paragraph) below.
